

When will your child stay at home?

With the help of this decision tree you can **assess whether or not your child can come to school**. The decision tree must be **completed separately for each child**. The information is based on the guidelines of the RIVM.

How long should a child stay at home?

Does the child have corona himself? If he has been at least 7 days since the child became ill and he hasn't had any symptoms for 24 hours, go through the decision tree again.

Does anyone in the child's household have corona? Wait until this person has no complaints for 24 hours and then keep the child at home for another 5 days. Or keep the child 1.5 meters away from the patient and keep the child at home for 5 days after the last contact. Does the child develop complaints in the meantime? Then we recommend having it tested. Doesn't it develop complaints? Then you can have it tested on the 5th day. With a negative test it is allowed to go back to school.

Does the child or a family member have corona, but no symptoms? Then they all stay at home for 3 days. If symptoms arise in the meantime, go through the decision tree again.
